

Samplers - manual/automatic

Product sampling for powdery and granular bulk material is a matter of trust.

A sample is only representative if it represents an average of the product. For the solution of this problem we offer samplers with either manual or automatic operation for flowery products up to cubical bulk material with particle sizes of 12mm as a maximum.

Manual:

Manual samplers in two different lengths. Construction in light metal for easiest cleaning. Close the product sampler and stick it into the bulk material, turn the handle and the sampler will open. Due to the shifted order of the sampling slots the sample will represent a product average. For the complete emptying of the sampler the handle has to be opened. For extensive cleaning the product sampler can easily be taken apart.

Type	length	diameter	weight	sample	openings
APNS06	1,5m	40mm	1,55kg	ca 400g	8
APNS06	2,0m	40mm	2,1kg	ca 400g	8

Automatic sampler for fix installation : universal sampler ASP297

The universal sampler is available with product specific inlet pipes for powdery and granular products. Construction of product touching parts in stainless steel 1.4301, electro polished. Mounting flange pipe for welding in standard steel ST3712, primed and finishing vanish in RAL5015. Optional assembly. Motor with drive can be turned by 90°. Sampling screw open for cleaning on the face side. The shaft extension between outlet and drive is closed so that within the product sampler dead angles are avoided. Operation with the control ASP212/S guarantees best possible operation.

Dimensions							
Motor: 3x230/400V/50Hz (others on request) screw speed 30 U/min	kW	a	b	c	d	e	f
		screw \varnothing	pipe \varnothing				
	0.18	45	54	160	54	80	656
	0.18	61	70	160	70	80	656
