

# Porta Digital

Temperature control unit for digital 2-wire  
Agromatic monitoring cables

The Porta digital is constructed as portable or stationary measuring unit for smaller Agromatic digital (2-wire) temperature monitoring systems for silo or storage. In a single dataline up to 64 sensors are registered and memorized (total max. 4800 measuring points).

The temperature values can be displayed and printed via the USB interface of a PC. Simultaneously the internal battery is recharged. Additional expensive devices are not needed.

The unit is designed in a metal housing and thus makes it ideal for rugged industrial applications.

The measuring line is connected via a M8 plug. The USB interface takes care of the data transfer via USB to USB mini cable to PC as well as the charging of the unit. The large, illuminated display shows: date/time of the measurement, bin number, sensor number, 3-digit temperature value for 3 sensors. Additional sensors can be scanned via the function keys. Agromatic Data Viewer software is released upon registration.

## Scope of delivery:

Art. 1020004 Porta digital, ready for operation, integrated battery, operating manual english/german, PC software free of charge after registration, USB cable and operating manual english/german

## Functioning:

easy operation via 3 direct control keys, automatic switch off after 5 minutes

Agromatic Data Viewer

## Options:

- Art. 1040023 Connection-/charging cable USB to USB mini length 1m
- Art. 1040024 Connection measuring cable with M8 plug and connection box with connector, clamps on harness
- Art. 1040025 connection cable measuring line with M8 connector and clamps for connection box at site
- Art. 1020005 PC Software Agromatic Data Viewer, supplied on USB-stick

## Technical data:

size: 1165mmxw85mmxh32mm, weight 390g
